

Sure, here are five functional and nonfunctional requirements for a web app that allows users to create an account and login by selecting images as their password using HTML, Javascript, Python, and SQLite:

Functional Requirements:

1. **User Registration:** The web app should allow users to register for an account by entering their details such as name, email, and password. Additionally, the web app should also allow users to select images as their password.
2. **Login:** The web app should allow users to log in to their account using their selected images as their password.
3. **Image Selection:** The web app should provide a user interface that allows users to select images as their password during the registration process.
4. **Password Verification:** The web app should verify the user's selected images as their password during the login process.
5. **Account Management:** The web app should allow users to manage their account information such as name, email, and password.

Non-Functional Requirements:

1. **Security:** The web app should ensure that the user's password and personal information are kept secure and protected from unauthorized access.
2. **Usability:** The web app should provide an intuitive user interface that is easy to use and navigate.
3. **Performance:** The web app should be responsive and load quickly to provide users with a seamless experience.
4. **Scalability:** The web app should be designed to handle a large number of users and be easily scalable to meet future demands.
5. **Compatibility:** The web app should be compatible with different browsers and devices to ensure that all users can access the application.
